APPROACH I explore how technical systems, effective processes, and social structures integrate as **socio-technical ecosystems** that surface ways to optimally use limited resources in a community. Specifically, I investigate how such ecosystems can scale effective undergraduate research training, where students learn to self-direct complex work in a community with limited mentoring resources. I take a design-based research approach, and work at the intersection of Human-Computer Interaction (HCI), Learning Sciences (LS), and Computer-Supported Cooperative Work (CSCW).
